

Project Overview

Objective: Revamp the existing restaurant website by drawing inspiration from the Yumix template. The goal is to create a modern, engaging, and conversion-oriented site that showcases your menu, tells your story, builds trust through social proof, and drives online reservations or orders.

The final design should maintain the unique character of your restaurant while adopting contemporary UI patterns: immersive hero images, clear information hierarchy, interactive elements, and responsive layouts that adapt seamlessly from desktop to mobile.

Design Analysis from Template

Overall Style

- **Modern & bold:** The site uses large typography, vibrant images and playful shapes to create an energetic, modern feel.
- **Dynamic layouts:** Sections alternate between dark and light backgrounds; asymmetrical layouts and custom shapes (e.g., scalloped cards for catering packages) add visual interest.
- **Fresh & appetising imagery:** High-resolution food photos dominate the layout, making the food the star of the page.

Layout Structure

1. **Header:** Dark bar with logo, navigation (Home, Menu, About, Blog) and a prominent call-to-action button ("Contact Us").
2. **Hero Section:** Split layout—big headline and CTA on the left, appetising burger image on the right. Includes a discount badge and a star rating for social proof ¹.
3. **Food Categories:** Card grid showing main dishes, beverages, desserts, etc.; each card includes a photo and the number of items ².
4. **Promotions/Deals:** Horizontal cards highlighting limited offers (e.g., "Buy 1 Get 1 Free" and "20% off first order") with images and CTAs ³.
5. **Menu Items:** Dark background showcasing individual dishes; each card features an image, price, category, dish name and a brief description ⁴.
6. **About & Counters:** Multi-column layout combining stats (unique menu items, reviews, outlets, orders delivered) with a mission statement and an image ⁵.
7. **Why Choose Us:** Icons with short descriptions emphasising quality, hygiene, customer support and deals ⁶.
8. **Catering Packages:** Uniquely shaped cards for social, corporate and wedding events ⁷.
9. **Testimonials:** Carousel of customer quotes with avatars and job titles ⁸.
10. **Gallery:** Mosaic of food photos with playful labels like "8K+ food photos shared" ⁹.
11. **FAQ:** Accordion list answering common questions with a CTA to contact support ¹⁰.
12. **Blog Preview:** Cards featuring blog articles with thumbnails, dates and snippets ¹¹.

13. **Instagram/Reels:** Encourages visitors to follow the brand with social-media content ¹² .
14. **Newsletter Signup:** Email field and subscribe button offering a discount ¹³ .
15. **Footer:** Dark footer with logo, tagline, social icons, quick links, contact information and address ¹⁴ .

Color Scheme (approximate HEX)

Color	Usage
#0A1B2A	Primary dark background (hero/menu/footer)
#FAF5D0	Light pastel background sections (categories, gallery, contact)
#FBCB1E	Accent color for buttons, highlights, headings, and discount badges
#FFFFFF	Primary text on dark backgrounds
#C2C2C2	Secondary text on light backgrounds
#EAEAEA	Borders and subtle separators

Typography

- **Heading font:** A bold, modern sans-serif such as **Poppins**, **Montserrat** or **Sora**. Large sizes (~48–60 px for the hero), heavy weight for headlines and numbers.
- **Body font:** Clean sans-serif like **Inter**, **Manrope** or **Open Sans**. Sizes range from 16–20 px; regular weight for body text; medium weight for subheadings.
- **Decorative scripts:** Not used—clarity is prioritised.

Images & Media

- **Hero images:** Full-bleed or split layout; high contrast between dark backgrounds and bright food photos. Dimensions roughly 50%–60% of the viewport width.
- **Menu/category cards:** Aspect ratio around 4:3, with rounded corners and subtle hover zoom or overlay.
- **Gallery:** Masonry or mosaic layout with mixed sizes for visual interest ⁹ .
- **People imagery:** Used sparingly—in mission, testimonial and FAQ sections—to humanise the brand.
- **Icons:** Simple line icons (food tray, lock, phone) used for feature highlights and lists.

Interactive Elements

- **Buttons:** Rounded rectangle buttons with bright accent colour and arrow icons. Hover states invert colour or add a slight shadow.
- **Hover effects:** Cards lift slightly or darken on hover; images may scale up subtly.
- **Carousels/Sliders:** Testimonials section uses an arrow-controlled carousel; gallery may slide on smaller screens.
- **Accordion:** FAQ uses plus icons to toggle answers.
- **Subscription form:** Simple input with CTA button; uses inline validation to highlight required fields.

Key Features to Emulate

- Strong social proof (ratings, testimonials, counters)
- Promotions and offers to drive conversions
- Modular content sections that can be reordered or reused
- Seamless navigation with clear CTAs (Explore Menu, Contact, Learn More)
- Multimedia content (gallery, blog, reels) to enhance engagement

Revamp Guidelines

Recommended Section Order

1. **Hero Section:** Eye-catching tagline, high-quality background image of signature dish, prominent CTA (e.g., “Order Online” or “Reserve a Table”), and optional discount badge.
2. **Food Categories:** Showcase core menu categories with cards and counts; enable quick filtering (e.g., starters, mains, desserts, vegan).
3. **Promotional Offers:** Highlight time-bound deals or loyalty programmes with vibrant cards and clear calls to action.
4. **Featured Menu Items:** Display 6–8 best-selling dishes with photos, prices and descriptions; include an “Add to Cart” or “View Details” button.
5. **About & Stats:** Tell your story—mission, heritage, philosophy. Use counters for years in business, dishes served, positive reviews, etc. Pair with a friendly photo of the chef or interior.
6. **Why Choose Us:** Present unique selling points (e.g., locally sourced ingredients, vegetarian options, chef specials) with icons and short descriptions.
7. **Special Services:** If your restaurant offers catering, private dining or events, create uniquely shaped cards similar to the template’s event packages.
8. **Testimonials:** Carousel or slider with real customer reviews and images. Add rating stars for visual consistency.
9. **Gallery:** A masonry grid of food and ambiance photos. Allow users to open images in a lightbox.
10. **FAQ:** Answer common questions (e.g., dietary restrictions, delivery policies) with an accessible accordion.
11. **Blog/News:** Include excerpts of recent posts, recipes or events; link to full articles.
12. **Social Reels or Instagram Feed:** Embed a feed or call to follow your social channels.
13. **Newsletter Signup:** Offer incentives (discounts, early access to specials) for joining your mailing list; include an email form with clear privacy notice.
14. **Footer:** Provide navigation, contact details, address, opening hours, social links and legal pages.

UI Components Needed

- **Navigation bar:** Fixed top, responsive hamburger on mobile.
- **Hero component:** Split layout with image and text; includes discount badge and CTA button.
- **Card components:** For categories, menu items, offers, event packages, blog posts.
- **Counter component:** Animated numbers for about section.
- **Icon list:** Reusable block with icon and text for features/benefits.
- **Carousel component:** For testimonials; includes arrows and swipe support.
- **Masonry gallery:** Responsive grid that stacks images elegantly.

- **Accordion component:** For FAQs; accessible with keyboard and screen readers.
- **Newsletter form:** Email input with validation and success messaging.
- **Footer layout:** Four-column grid with logo, links, contact and social icons.

Color Palette & Font Pairings

Use the colour palette above as a base. For variation: - Accent variations: **#FFD84D** (lighter yellow), **#FFC200** (darker yellow). - Secondary accent: **#E34234** (warm coral) can highlight special offers.

Font pairing suggestions: - **Headings:** `font-family: 'Poppins', sans-serif; font-weight: 700;` - **Body:** `font-family: 'Inter', sans-serif; font-weight: 400;` - Maintain at least **4.5:1** contrast ratio for text against backgrounds.

Mobile Responsiveness Guidelines

- Collapse navigation into a hamburger menu; keep the CTA button visible (e.g., by placing it under the menu icon).
- Stack two-column layouts vertically; ensure images span the full width on mobile.
- Adjust card grids: use 1-column on mobile, 2-columns on tablets, 3-columns or more on desktop.
- Reduce oversized headings; maintain legible line lengths (50–75 characters) and comfortable spacing.
- Ensure touch targets are at least **44 × 44 px**; increase padding on buttons.

Accessibility Tips

- Use semantic HTML (e.g., `<header>`, `<nav>`, `<main>`, `<section>`, `<footer>`).
- Provide descriptive **alt text** for all images (e.g., “Fresh burger with lettuce and cheese”).
- Implement **focus states** on interactive elements and ensure keyboard navigation works for menus, carousels and accordions.
- Label form inputs with `<label>` tags; show error messages near inputs.
- Avoid using colour alone to convey information; pair icons or text with colours.
- Use ARIA roles for accordion (`role="button"`, `aria-expanded`) and carousels (`role="region"`).

Implementation Instructions for Cursor

Below is a high-level guide to implement the revamp using HTML, Tailwind CSS and Vue components. Adapt as needed for your technology stack.

1. HTML Structure & Vue Components

```
<!-- App.vue or main layout -->
<template>
  <div class="font-sans text-gray-900">
```

```

<Header />
<main>
  <HeroSection />
  <CategorySection />
  <PromotionsSection />
  <FeaturedMenuSection />
  <AboutSection />
  <FeaturesSection />
  <PackagesSection />
  <TestimonialsSection />
  <GallerySection />
  <FAQSection />
  <BlogSection />
  <SocialSection />
  <NewsletterSection />
</main>
<Footer />
</div>
</template>

```

Component Breakdown

Component	Responsibility
Header.vue	Navigation bar with logo, links, CTA button. Use <code><nav class="bg-dark-900 text-white"></code> and flex utilities. Add mobile <code><button @click="toggleMenu"></code> to control menu visibility.
HeroSection.vue	<code><section class="relative flex flex-col-reverse md:flex-row items-center bg-dark-900 text-white"></code> ; left side contains headline (<code><h1 class="text-4xl md:text-6xl font-bold"></code>), description and CTA button (<code><BaseButton /></code>); right side contains hero image and discount badge absolutely positioned.
CategorySection.vue	Grid of category cards (<code><CategoryCard v-for="category in categories" :key="category.id" ... /></code>); each card uses a <code><div></code> with image background, overlay gradient and title. Use <code>grid grid-cols-1 sm:grid-cols-2 md:grid-cols-4 gap-4</code> .
PromotionsSection.vue	Two promotional cards with images and copy. Use <code>grid grid-cols-1 md:grid-cols-2 gap-6</code> . Each card should include a CTA button.
FeaturedMenuSection.vue	Fetch or define a list of featured dishes. Render with a grid layout; each <code><MenuCard /></code> shows image, price, category, title, description and a button. Tailwind classes: <code>bg-dark-900 text-white rounded-xl overflow-hidden shadow-lg hover:shadow-xl transition</code> .

Component	Responsibility
AboutSection.vue	Multi-column flexbox: left (stats), centre (mission text & CTA), right (image). Stats can be a custom <code><Counter /></code> component animating numbers via JavaScript.
FeaturesSection.vue	Four icon/feature items displayed with <code>grid grid-cols-1 sm:grid-cols-2 lg:grid-cols-4 gap-6 bg-light-cream py-12</code> ; each includes a <code><svg></code> icon and a text block.
PackagesSection.vue	Cards with custom shapes (can be approximated via CSS <code>clip-path: polygon(...)</code> or by using <code><svg></code> backgrounds). Each card contains an image and caption. Use <code>grid grid-cols-1 md:grid-cols-3 gap-6 bg-dark-900 text-white</code> .
TestimonialsSection.vue	A <code><Carousel /></code> component that iterates through testimonials; utilise a library or implement with <code>transition-group</code> and <code>v-show</code> ; arrows for navigation; ensure focusable and swipeable on mobile.
GallerySection.vue	Masonry layout using CSS columns (<code>columns-2 md:columns-3 lg:columns-4</code>); images inside maintain aspect ratio and margin bottom. Alternatively, use a Vue masonry library.
FAQSection.vue	Accordion list; each item toggles its state when clicked. Use <code><Disclosure /></code> component or custom logic with <code>v-for</code> and <code>@click</code> . Highlight selected item using a border or icon rotation.
BlogSection.vue	Render three article cards with image, date, reading time and truncated description. Use <code>grid grid-cols-1 md:grid-cols-3 gap-6</code> .
SocialSection.vue	Optional Instagram or TikTok feed; or a simple CTA card inviting users to follow; include social icons (<code><IconInstagram /></code>) and a button.
NewsletterSection.vue	Email input field with <code>type="email"</code> , placeholder, and "Subscribe" button. Use <code>flex flex-col md:flex-row items-center gap-4</code> ; implement basic validation in Vue (<code>v-model="email"</code> and pattern check). On submit, call an API endpoint.
Footer.vue	Dark background with four columns; include logo and tagline, navigation links, contact details, social icons; at the bottom, display copyright and any required legal notices.

2. Tailwind CSS Utility Classes

- Define custom colours in `tailwind.config.js`:

```
module.exports = {
  theme: {
    extend: {
      colors: {
```

```

    'dark-900': '#0A1B2A',
    'light-cream': '#FAF5D0',
    'accent-yellow': '#FBCB1E',
    'accent-red': '#E34234',
  },
  fontFamily: {
    sans: ['Inter', 'sans-serif'],
    heading: ['Poppins', 'sans-serif'],
  },
},
},
},
}

```

- Use responsive utilities (`md:` , `lg:`) to adjust grid columns and padding.
- Utilize `rounded-xl` , `shadow-lg` , `hover:shadow-2xl` , `transition-transform` for cards.
- For buttons: `inline-flex items-center px-6 py-3 rounded-lg font-semibold text-dark-900 bg-accent-yellow hover:bg-yellow-400 focus:outline-none`.
- For accordions: `border-b border-gray-700` and `transition-max-height` for smooth expansion.

3. JavaScript Interactions

- **Carousel/Slider:** Use Swiper.js or Vue-awesome-swiper for testimonial and gallery slides; enable autoplay and navigation controls.
- **Counter Animations:** Implement a simple counter using `requestAnimationFrame` that increments numbers when the section enters the viewport (intersection observer).
- **Accordion:** Maintain a `selectedIndex` state; toggle content on click; ensure focus management.
- **Scroll Animations:** Use CSS `scroll-behavior: smooth` for anchor links; optionally integrate AOS (Animate On Scroll) for fade/slide effects.
- **Form Handling:** Validate email field and integrate with newsletter service (Mailchimp, Sendinblue). Provide success and error feedback to the user.

Color Palette & Typography

Token	HEX	Usage
<code>--dark-900</code>	#0A1B2A	Hero, menu section backgrounds, footer
<code>--light-cream</code>	#FAF5D0	Category, gallery, FAQ backgrounds
<code>--accent-yellow</code>	#FBCB1E	Buttons, highlights, discount badges
<code>--accent-red</code>	#E34234	Optional for special offers or warnings
<code>--text-primary</code>	#FFFFFF on dark backgrounds	Main headings and body text
<code>--text-secondary</code>	#1F2937 on light backgrounds	Subtext and captions

Token	HEX	Usage
--border	#EAEAEA	Card borders, dividers

Fonts: - Poppins for headings (font-weight: 700–800, sizes 2.5–3rem for major headings). - Inter for body text (font-weight: 400–500, sizes 1rem–1.25rem).

Component Breakdown

1. **BaseButton.vue:** Reusable button component with props for label, variant (primary/secondary), icon and click handler.
2. **CategoryCard.vue:** Displays category image, title and item count; uses hover overlay.
3. **MenuCard.vue:** Shows dish image, price, category label, title and description; may include an “Add to cart” or “View details” button.
4. **Counter.vue:** Animates numbers from 0 to target when visible.
5. **FeatureItem.vue:** Icon + heading + description; used in Why Choose Us.
6. **PackageCard.vue:** Custom-shaped container for catering packages; includes image and caption.
7. **TestimonialItem.vue:** Quote, avatar, name and role; used inside carousel.
8. **GalleryItem.vue:** Single photo within the masonry grid; includes optional overlay or caption.
9. **FAQItem.vue:** Contains a question and an expandable answer section; accessible attributes included.
10. **BlogCard.vue:** Thumbnail image, date, reading time, title and excerpt; includes “Read more” link.
11. **NewsletterForm.vue:** Email input, submit button and success/error messaging.

Special Notes

• SEO Considerations:

- Use descriptive meta titles and descriptions on each page and article.
- Structure content with proper heading hierarchy (<h1> for page title, <h2> for section titles, etc.).
- Include schema.org structured data for menu items and reviews (e.g., Restaurant and MenuItem schema).
- Optimize images via srcset and lazy loading (loading="lazy") to improve performance.
- Generate clean, semantic URLs for blog posts and menu items.

• Performance Tips:

- Compress images (WebP/AVIF) and serve responsive sizes.
- Minify CSS and JavaScript; implement code-splitting with Vue’s lazy-loaded routes and components.
- Use a content delivery network (CDN) for static assets.
- Prefetch critical fonts to reduce layout shift.
- Implement caching headers on the server side.

• Security & Privacy:

- Serve the site over HTTPS.
- Sanitize user inputs (especially for forms and newsletter signups).
- Provide clear cookie and privacy policies in the footer.

Following these guidelines will help you transform your existing restaurant website into a vibrant, user-friendly experience that draws from the best elements of the Yumix template while remaining unique to your brand.
